Ciphers.

Cipher is an algorithm for encrypting and decrypting data to conceal its meaning.

Basic working scheme of ciphers

Substitution cipher: Replace each letter of the alphabet by some other letter.

Example.

encryption/decryption key

message: TOP SECRET

Hill cipher: Use matrix multiplication

Example.

$$A = \left[\begin{array}{ccc} 0 & 1 & 1 \\ 1 & 1 & 0 \\ 0 & 2 & 1 \end{array} \right]$$

encryption key invertible matrix

$$A = \begin{bmatrix} 0 & 1 & 1 \\ 1 & 1 & 0 \\ 0 & 2 & 1 \end{bmatrix} \qquad A^{-1} = \begin{bmatrix} 1 & 1 & -1 \\ -1 & 0 & 1 \\ 2 & 0 & -1 \end{bmatrix}$$

decryption key matrix inverse

message: TOP SECRET

Encryption:

1) Replace letters by numbers:

	. A	В	С	D	Ε	F	G	Н	I	J	K	L	М	Z	0	Р	Q	R	S	Τ	U	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26

- 2) Since the key is a 3×3 matrix split the number sequence numbers in vectors with 3 entries each.
- 3) Multiply each vector by the encryption matrix A.

4) Write the new vectors as a sequence of numbers.

Decryption.

31 35 46 24 19 43 23 21 41 48 44 72

1) Split the sequence of numbers into vectors and multiply each vector by A^{-1}

2) Write the new vectors as a sequence of numbers.

3) Replace numbers by letters:

_	А	В	C	D	Ε	F	G	Н	_	J	K	L	М	Z	O	Р	Q	R	S	Т	\cup	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26
